

Project Navigator

Project Navigator

1.0 Purpose

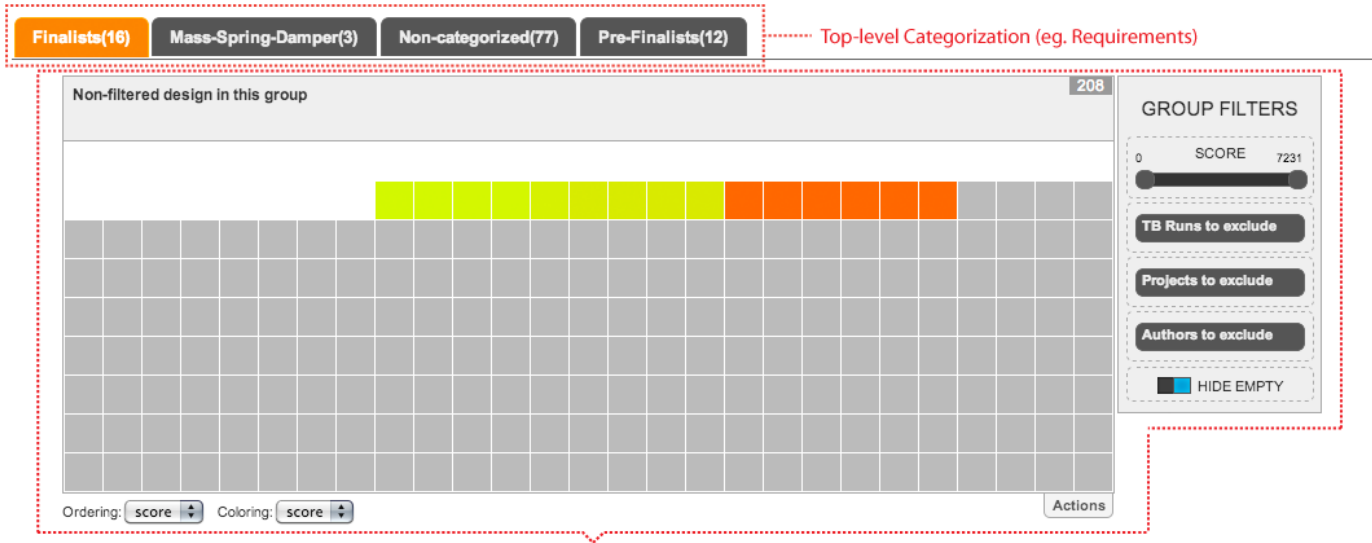

The Project Navigator is going to be the center of teams' home space. It is going to provide the framework for all design related visualization and VF-based analysis services, such as the online Dashboard, also referred to as [VehicleFORGE/Design Analyzer](#).

2.0 How to Access

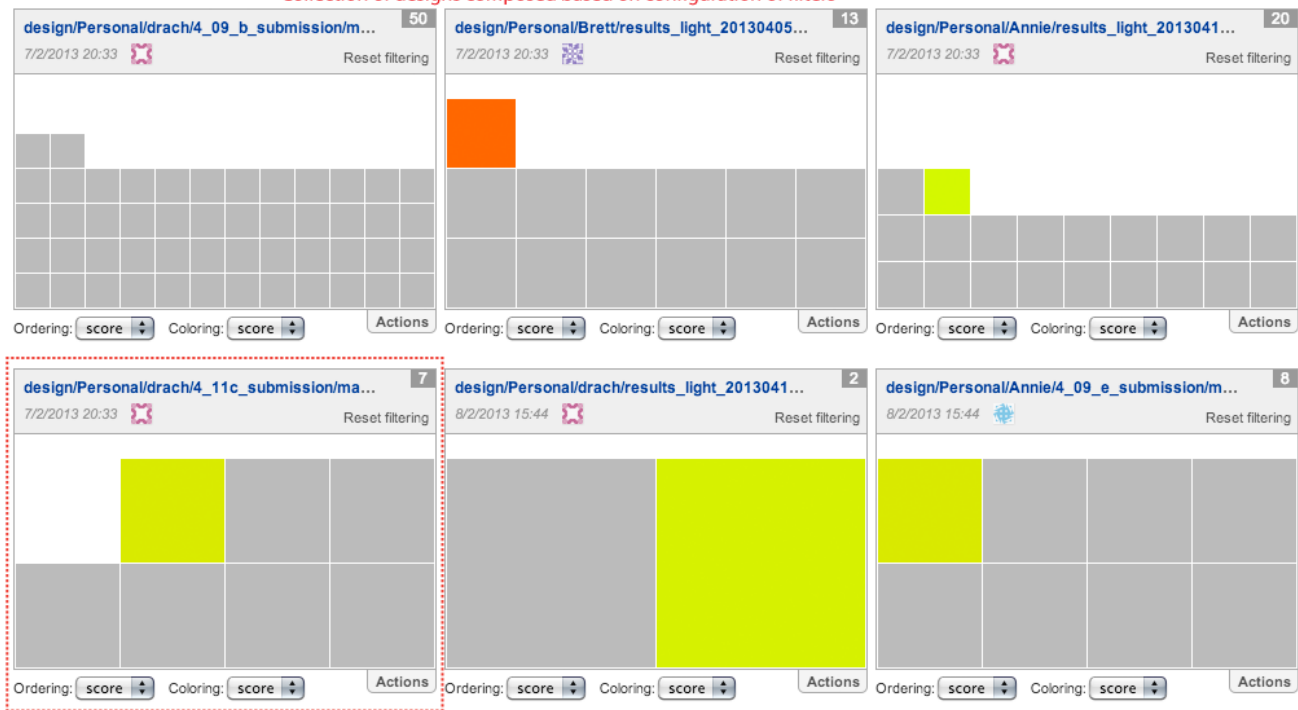

This tool is accessible from the teams' home area and offers comprehensive organizing and overviewing functionalities to navigate the design space.

3.0 Use

Projects and designs which have been uploaded to the forge are displayed in a tab-grouped layout. The CyPhy projects belonging to the same requirements appear on the bottom of the screen as containers with colorized boxes representing individual design points. The top of the screen is a collection of design points from the individual projects listed below. The filter controls in on the Group Filter panel specify which designs should be excluded (or included) in the collection.

Collection of designs composed based on configuration of filters

CyPhy Project with designs uploaded to VF Team-repository

4.0 Future Tool Capabilities

We will be adding extensions and improvements throughout Beta-testing. For example:

- allow saving of collections/filter settings
- allow sharing of collections/filter settings
